

Article Overview

Angola offers professional on-site fiber optic splicing and network maintenance services through specialized companies like Anglobal, Angola Cables, and GMB Cable Contractors.

Key Service Providers

Anglobal is a leading Angolan company specializing in the construction, installation, and maintenance of telecommunications networks. They provide on-site fiber optic services including splicing, stabilization, and commissioning of backbone, metro, and last-mile networks. With over 17 years of experience, Anglobal has completed around 2,000 km of fiber optic networks and offers full turnkey solutions for data centers and network infrastructure projects . Angola Cables operates both submarine and terrestrial fiber-optic systems, supporting high-speed internet and data services. They provide technical support for fiber splicing, testing, and network troubleshooting, using advanced equipment such as OTDR testers, high-precision power meters, and BERT systems for signal integrity validation . GMB Cable Contractors offers comprehensive fiber optic construction and on-site splicing services. Their teams handle underground, aerial, and premise applications, performing splicing, activation, spectrum testing, and as-built mapping. They provide 24/7 emergency response and storm standby services, ensuring rapid restoration of network outages . LTS Group (operating across Africa) also provides on-site fiber splicing, termination, rerouting, and maintenance services. They deploy both overground and underground fiber networks and maintain high service levels using advanced monitoring technologies like Fiber Guardian .

Services Offered

- o Fiber Splicing and Termination: Fusion and mechanical splicing for backbone, metro, and access networks.
- o Network Testing and Troubleshooting: OTDR testing, insertion loss measurement, and signal integrity validation.
- o Emergency Repairs: Rapid on-site response to fiber cuts or outages.
- o Turnkey Network Solutions: Design, installation, commissioning, and maintenance of FTTx networks (FTTH, FTTB, FTTO, FTTC).
- o Data Center Integration: Full deployment from conception to commissioning, including fiber connectivity.
- o Network Auditing and Supervision: Mapping, performance analysis, and reporting to ensure operational efficiency.

Advantages of Using Local Providers

- o Experienced Technical Teams: Specialized engineers with years of experience in fiber optic projects across Angola and Africa.

Angola Fiber Optic Cable Splicing Company

- o Advanced Equipment: Use of high-end OTDRs, power meters, and BERT systems for precise splicing and testing.
- o Comprehensive Coverage: Ability to handle both terrestrial and submarine fiber networks, including last-mile access.
- o Rapid Response: On-site teams available for emergency repairs and maintenance to minimize downtime. For businesses or operators in Angola seeking fiber optic splicing and on-site services, these companies provide reliable, professional, and fully integrated solutions to ensure network performance, continuity, and high-speed connectivity.
