

Article Overview

Omatapalo Group and Anglobal are leading Angolan companies specializing in fiber optic trenching and telecommunications infrastructure deployment.

Omatapalo Group

Omatapalo Group is Angola's largest domestically-owned construction and engineering conglomerate, with extensive experience in fiber optic cable deployment and trenching. Their telecommunications division, Omatapalo Telecomunicacoes, handles the installation of fiber optic ducts, outside plant infrastructure, and civil works for major national backbone projects. The company has installed an estimated 2,800 kilometers of fiber optic cable across Angola, often in collaboration with Angola Telecom, INFOSI, and the Ministry of Telecommunications, making it a key partner for large-scale fiber optic trenching projects .

Anglobal

Anglobal is a market leader in Angola for the construction and installation of telecommunications networks, including fiber optic trenching, backbone networks, and last-mile access networks. The company has constructed approximately 2,000 kilometers of fiber optic networks, covering backbone, metro, and access networks. Anglobal provides turnkey solutions, including network planning, trenching, duct installation, fiber laying, equipment installation, and commissioning, ensuring full operational readiness for client networks .

Additional Considerations

While Angola Cables primarily focuses on subsea fiber optic systems and data center operations, it does not directly manufacture or trench fiber optic networks domestically but may partner with local contractors for terrestrial deployment . For companies seeking fiber optic trenching services in Angola, Omatapalo Group and Anglobal are the most prominent domestic providers, offering both civil engineering expertise and specialized telecommunications infrastructure capabilities. These companies are well-positioned to handle large-scale projects, including backbone expansion, metro networks, and last-mile fiber access.
