Plastic distribution boxes are protective enclosures used to house and organize electrical components such as circuit breakers, switches, and wiring. Made of ABS or polycarbonate, these boxes offer a combination of strength and lightness. With more than 20 years of experience in manufacturing logistics plastic products, we produce plastic box using high-impact HDPE and PP raw materials, which provide excellent durability, corrosion resistance, low temperature resistance, and easy cleaning performance. Unlike traditional metal boxes that can corrode or conduct. The groove contours of electronic distribution boxes and the very narrow grooves of micro-distribution housings are seamlessly sealed with the sealing foams of the polyurethane-based FERMAPOR K31 or the silicone-based FERMASIL product families. As urban networks adopt smart monitoring and eco-resilient materials, these enclosures now serve as more than protective casings -- they are part of intelligent energy and drainage systems. Industrial facilities operating in corrosive environments face significant challenges when selecting electrical distribution equipment that can withstand harsh chemical exposures, moisture, and extreme temperature fluctuations.

In recent years, plastic distribution boxes have gained significant attention. Unlike traditional metal distribution boxes, plastic

For the construction of your control cabinets, we as process experts offer you individual consulting for the

The right large plastic storage boxes can fundamentally improve how your industrial operations manage inventory and

EKDB10 Series IP65 waterproof distribution boxes offer premium protection for electrical

Advanced PVC and polycarbonate enclosures have redefined durability. Weatherproof
