Wiring Direction: Wiring between the main circuit breaker and each branch circuit breaker in the box generally goes on the left, and the wiring out of the distribution box generally goes on the right. **Binding Requirements:** The wires should be bound with plastic. With all of that said, whether you or a professional is actually carrying out the task, you have a couple of likely paths to resolution when wires are exposed outside of an electrical enclosure. The solution to exposed wires is to cover them with something. In most cases, you're going to use. There is a 10-2 (w/ground) UF cable which runs from my main panel in the basement, through the joists in the crawlspace, and exits the house here: Here's the outdoors side, where it connects to the disconnect (which is right out of view at the top of the picture): It doesn't look like whoever did. Once electricity is carried beyond your meter, it is distributed to lights, receptacles, and appliances throughout the house by several different electrical circuits.
