

Conveyor rack that can be used immediately

Article Overview

Flow racks and gravity conveyors are ideal conveyor rack systems that can be used immediately for order picking and material handling.

Flow Racks with Integrated Conveyors

Flow racks are dynamic storage systems designed for fast, ergonomic, and reliable order picking. Products are loaded on inclined roller or skatewheel levels and slide from the loading side to the unloading side, allowing first-in, first-out (FIFO) handling. Many flow racks come with integrated belt or roller conveyors, enabling prepared orders to move directly to dispatch areas without additional setup . These systems are modular, versatile, and can be configured for multiple levels, making them suitable for immediate deployment in warehouses or production lines .

Gravity Conveyors

Gravity conveyors are motor-free systems that use sloped frames and rollers or skate wheels to move cartons, totes, or lightweight items. They are cost-effective, low-maintenance, and easy to install, making them ideal for temporary lines, packing stations, or feeding other conveyor systems . Because they require no wiring or controls, gravity conveyors can be used immediately and are particularly effective for uniform loads and simple material flow.

Pick-to-Light and Modular Flow Racks

Some flow racks, such as pick-to-light kitting systems, are powered by a basic controller and can be set up quickly. These racks feature angled lanes for containers to flow from load to picking end, reducing repetitive motion and improving efficiency . Heavy-duty versions can handle plastic totes, corrugated boxes, or unpackaged parts, and modular designs allow for rapid assembly and immediate operation.

Key Considerations for Immediate Use

- o Modularity: Choose systems with pre-assembled modules or adjustable lanes for quick setup.
- o Integration: Flow racks with built-in conveyors or gravity-fed lanes reduce the need for additional equipment.
- o Load Type: Ensure the system matches the size, weight, and type of items being handled.
- o Space Utilization: Multi-level flow racks can maximize vertical space while maintaining accessibility. By selecting flow racks with integrated conveyors or gravity-fed conveyor systems, you can deploy a conveyor rack solution immediately, supporting efficient order picking, staging, and material handling without extensive
