

Article Overview

Guatemala offers both local and international suppliers for custom-made wiring terminals and distribution boxes, suitable for industrial, commercial, and hazardous area applications.

Local Suppliers

ELECSA provides a wide range of distribution panels and circuit breakers manufactured under international quality standards, located in Mixco, Guatemala City, offering both standard and potentially customizable solutions for electrical distribution needs. Disgema, S.A. is a national company with over 20 years of experience supplying electrical materials, structured cabling, and accessories. They offer personalized service, on-site delivery, and can assist with custom wiring solutions for distribution boxes and terminal connections. Brilltech Engineers Pvt. Ltd. operates in Guatemala with in-house manufacturing of electrical panels, LT distribution panels, cable bus ducts, and power control panels. They provide customization according to client specifications and have experience with industrial and commercial installations.

International Suppliers with Custom Solutions

Atex Delvalle specializes in custom-made local control stations and distribution boxes, including explosion-protected enclosures. They manufacture stainless steel (AISI 304L/316L) and GRP enclosures, fully configurable with terminals, operators, and cable glands. Their products are certified for hazardous areas (ATEX, IECEx) and can be tailored for extreme climatic conditions. R. STAHL offers bespoke terminal boxes and combinations for energy distribution, including standard and custom-made solutions suitable for hazardous areas worldwide. Their products are certified for global installation standards and can be adapted to specific project requirements.

Considerations for Custom Orders

- o Material and Certification: Choose suppliers that provide enclosures with appropriate certifications (ATEX, IECEx, UL) if the installation involves hazardous areas.
- o Customization Options: Ensure the supplier can configure internal terminals, cable entries, and control elements according to your project needs.
- o Delivery and Support: Local suppliers like Disgema and ELECSA can provide faster delivery and on-site support, while international suppliers may offer specialized solutions for extreme conditions.
- o Integration: Consider whether the distribution boxes need to integrate with existing panels, control systems, or monitoring devices. By combining local expertise with international certified solutions, you can obtain custom-made wiring terminals and distribution boxes in Guatemala that meet both technical and regulatory requirements.

Custom-made wiring terminals for distribution boxes in Guatemala
