

# Distribution Box Marking Box

## Article Overview

Distribution boxes (DB boxes) are labeled and marked to ensure safe, organized electrical distribution, while distribution statements in documents indicate authorized access and dissemination.

## Electrical Distribution Box Marking

A distribution box (DB box) is a central hub that distributes electrical power from a single input source to multiple circuits in homes, offices, or industrial settings . Proper marking and labeling of DB boxes are essential for safety, efficiency, and maintenance. Key practices include:

- o Circuit Identification: Each breaker or fuse should be labeled with the specific room, appliance, or system it controls. For example, "Kitchen outlets east wall" or "Living room lights" .
- o Use of Durable Labels: Sticky labels, pre-printed circuit labels, or label makers are recommended. Avoid masking tape, which can peel or fade.
- o Visual Indicators: Many DB boxes include indication lights to show mains power status, helping quickly identify active circuits .
- o Testing and Documentation: Use a circuit finder or voltage tester to verify which breaker controls each outlet. Maintain a worksheet or digital record for reference .
- o Safety Precautions: Always wear insulated shoes, keep hands dry, and avoid overloading circuits during testing. Labeling can often be done with the panel cover on to reduce risk .

## Document Distribution Marking

In the context of controlled documents, a marking box or distribution statement communicates who is authorized to access the document and under what conditions . Key elements include:

- o Controlled By: Identifies the organization or office responsible for the document.
- o CUI Category: Specifies the type of Controlled Unclassified Information (CUI) or classification.
- o Distribution Statement: Indicates the level of dissemination, such as public release, government agencies only, or DoD contractors. Examples include:
  - o Distribution Statement A: Approved for public release.
  - o Distribution Statement D: Authorized for DoD and contractors only.
- o Point of Contact (POC): Provides the responsible individual or office for inquiries .

## Summary

Proper marking of DB boxes ensures safe and efficient electrical management, while distribution marking in

# Distribution Box Marking Box

documents ensures compliance with access and dissemination rules. Both practices rely on clear labeling, standardized formats, and accurate documentation to prevent errors, enhance safety, and maintain regulatory compliance.
