

Do you still need a router with gigabit fiber optic internet

Preview

While fiber internet doesn't require a modem, you still need a router to distribute the connection across your network. Your router works hand-in-hand with the ONT, taking the internet signal and spreading it wirelessly or through Ethernet cables to all your connected devices. If you've recently upgraded to fiber router service offering gigabit or multi-gigabit speeds, your current router may be the weak link preventing you from achieving maximum performance. Routers designed for DSL (which uses phone line inputs) or cable (which uses coaxial inputs) won't work. The Optical Network Terminal serves as.

While fiber internet doesn't require a modem, you still need a router to distribute the connection across your network. Your router works hand-in-hand with the ONT, taking the internet signal and spreading
