The pilot will take place in Building NEXT, Strijp-S Eindhoven, with the following objectives: Increase the level of comfort, convenience, safety and sustainability. Enable the opportunity to participate on the energy market. Use household appliances as a source of flexibility. Together with Alliantie Digitaal Samenleven, Freedom Internet and the municipality of Westerkwartier, 48percent will connect 50 households to low-cost internet. The investment plans are intended to give the regulator (ACM), the. It's been a couple of busy weeks in InterConnect's Dutch residential building "Next". This allows electric cars not only to store electricity, but also to feed it back into the electricity grid in a controlled way. Smart networks form the backbone of a future-proof energy system: they enable the transition, provide.
