

Article Overview

Standard electrical cable tray supports typically range from \$10 to \$50 per unit, depending on material, size, and load capacity.

Overview of Cable Tray Supports

Cable tray supports, also called brackets or hangers, are used to secure cable trays to walls, ceilings, or overhead structures, ensuring proper cable management and safety in electrical installations . They are available in light-duty, medium-duty, and heavy-duty versions, with materials including galvanized steel, stainless steel, and powder-coated steel . The choice of support depends on the weight of the cables, the type of tray (ladder, ventilated, or solid-bottom), and environmental conditions such as indoor, outdoor, or corrosive environments .

Typical Price Range

- o Light-duty supports: \$10-\$20 per piece, suitable for small cable trays or low cable loads.
- o Medium-duty supports: \$20-\$35 per piece, used for standard commercial installations with moderate cable weight.
- o Heavy-duty supports: \$35-\$50+ per piece, designed for industrial or high-load applications, including large power cables or long spans .

Prices can vary based on supplier, brand, and additional features such as adjustable height, corrosion resistance, or pre-drilled mounting holes. Bulk purchases often reduce the per-unit cost.

Supplier Options

- o RS Components: Offers a wide range of cable tray supports and hangers from brands like Legrand, Schneider Electric, and Phoenix Contact .
- o ChannelandTray: Provides light, medium, and heavy-duty supports with durable materials and various widths for different installations .
- o OBO CMS: Specializes in industrial-grade cable support systems, including wall brackets, suspended supports, and center suspensions .

Additional Considerations

When budgeting, consider installation hardware (bolts, nuts, anchors) and compatibility with the cable tray type. For outdoor or corrosive environments, galvanized or stainless steel supports are recommended, which may increase the cost slightly. Always verify that the supports comply with DIN EN 61537 or equivalent
