

Energy Internet Trading Center

Preview

ETC provides the intelligence and execution layer for renewable energy transactions -- combining market data, pricing signals, and transaction workflows so participants can price, position, and access energy markets beyond traditional PPAs. Built for energy market participants. Effortless trading experience by creating RFQs with natural language in seconds! Accelerate price discovery by sending price proposals or target prices! Create individual spreads. European energy markets run on fragmented signals: broker-quoted prints for pricing, bilateral. Access to the wholesale prices traded on the various energy trading platforms is a prerequisite for an efficient, modern and transparent energy supply. Ease of use, good. ITC AG delivers energy management apps and web portals for utilities. With about 700 customers of the energy provider and utilities sector in Europe, ITC AG is a leading provider of professional portals and apps for online service customer care, sales, smart metering, smart energy and energy.
