Explore the complete manufacturing and testing process of fiber optic patch cords, including polishing, assembly, and IL/RL testing. Discover how Gcabling ensures consistent quality for high-performance connectivity. Their performance directly impacts signal quality, insertion loss (IL), and return loss (RL). Behind every stable insertion loss value, every clean endface, and every reliable connection is a long chain of precise processes, specialized equipment, and strict quality control. When one connector carries 8, 12, 16, 24, or more fibers. Step 1: Raw Material Preparation - Building Blocks of Excellence We start with premium-grade Corning(R) or OFS(R) fibers, selecting single-mode (SMF-28e(R)) or multi-mode fibers (OM3/OM4) based on application needs. Single-mode fibers excel in long-distance transmission, while multi-mode fibers optimize.

Always use patch cable nozzles when cleaning is not required, and deflect/connect the rods.
