Explore 72 top manufacturers and suppliers of Fiber Optic Sensors in our comprehensive photonics buyers' guide. A fiber optic sensor is a device that uses optical fibers to detect and measure physical, chemical, biological, or environmental parameters. Fiber optic sensors have a flexible, thin cable and a small sensor head that enables detection in confined spaces. Fiber-optic sensors are measurement devices where an optical fiber serves either as the sensing element itself (intrinsic sensor) or as a conduit to transport light to and from a sensing element (extrinsic sensor). Comes with plastic and glass fiber types. Advance Electrical & Automation is estimated to have 10-49 employees.
