## Preview

A fiber-optic switch allows you to connect two or more fiber-optic cables to form a network. These can behave like a typical Ethernet switch. The standard covered a network architecture that would place fiber hubs in the computer room and run backbone fiber to the telecom room, then through passive interconnects to the desktop. This process involves extending the high-speed optical connection from your service provider's demarcation point to specific. Indoor cables connect devices within homes, office buildings, data centers, and other interior spaces. This guide explores different types of fiber optic cable, including indoor fiber.
