Flame-retardant cable trays

Article Overview

Flame-retardant cable trays are available in FRP/GRP, steel, aluminum, and fiberglass with fire-resistant coatings, designed to prevent fire spread and ensure safe cable management.

Types and Materials

FRP/GRP Cable Trays: These trays are made from Fiberglass Reinforced Plastic (FRP) or Glass Reinforced Plastic (GRP), offering high corrosion resistance, electrical insulation, UV stability, and flame retardancy. They are lightweight, non-magnetic, and suitable for harsh environments such as chemical plants, coastal areas, and power stations. Kingdom Grating and SV Composites manufacture FRP/GRP trays with ladder and perforated designs, using fire-resistant resins like Isophthalic Polyester and Vinyl Ester, meeting standards such as UL 94 Flame Retardant ratings, IS 6746, and NEMA FG-1 . Metallic Fire-Rated Trays: Fire-rated trays are also available in stainless steel, galvanized steel, and powder-coated aluminum, often enhanced with intumescent coatings to maintain structural integrity during a fire. These trays are designed to prevent flame propagation, support critical cables, and comply with fire safety codes. NewReach offers such trays with proven technologies like FLAMMOTECT-A and DG-CR 0.7, suitable for emergency systems, substations, and industrial facilities .

Applications

Flame-retardant cable trays are used in industrial plants, power stations, hospitals, airports, high-rise buildings, and offshore facilities. They ensure that electrical and communication systems remain operational during fire events, supporting emergency lighting, fire alarms, and building management systems . FRP trays are particularly advantageous in corrosive or outdoor environments, while metallic fire-rated trays are preferred where high mechanical strength and fire endurance are critical.

Accessories and Customization

Manufacturers provide a wide range of accessories including coupler plates, expansion plates, angle plates, hold-down clips, cover clamps, trefoil clamps, and divider strips. These ensure secure cable management and adaptability to complex layouts. Custom sizes, bends, tees, crosses, and reducers are available to meet specific project requirements .

Key Considerations

o Fire Resistance: Check UL, NEMA, or local fire safety ratings.
o Material Selection: FRP/GRP for corrosion resistance; steel/aluminum for mechanical strength.
o Environmental Resistance: UV, chemical, and moisture protection for outdoor or industrial use.

o Compliance: Ensure trays meet local building and fire codes. Manufacturers like Kingdom Grating, SV Composites, NewReach, and Flamro provide a variety of flame-retardant cable trays suitable for diverse industrial and commercial applications .

With our fire protection for cable systems, we ensure that your lines meet the highest safety standards and

High Corrosion Resistance: No rusting in acid, saline or chemical atmospheres. High Strength-to-Weight: Supports heavy cable

Find your cable tray easily amongst the 87 products from the leading brands (Legrand, LaCont, Rototherm, ...) on DirectIndustry, the

Basor cable trays against fire In the absence of applicable European or international regulations, different

Meka Pro regularly tests the fire resistance of its products to ensure high-quality and safe cable

At Satyam Composites, we specialize in manufacturing high-quality FRP (Fiberglass Reinforced Plastic) and GRP (Glass Reinforced

Our FRP cable support systems are ideal for locations where the metallic systems get easily corroded (Iron forms rusty layer and

We provide flexible installation options, including single and multi-conductor tray cables that can be installed in free air, raceways, or

Cablofil® Products Cablofil is the global gold standard for total cable management. Explore the one-stop shop for innovative, fast,

Cable trays are intended for the construction of fire-resistant cable paths with surface cable laying. Cable

Upgrade infrastructure safety with the DAKEN DFCT. Featuring an epoxy intumescent coating and ventilated design to prevent

Yes, GRP cable trays are made from flame retardant materials and can withstand exposure to fire without

Selecting flame-retardant control cables in 2026? Our updated guide covers fire class ratings, conductor specs & selection criteria.

Fire Resistance Testing of Cable Trays ensures they don"t fuel fires or emit toxic smoke.

Flame-retardant cable trays

Sinisi Solutions works with major utilities and clients to design cable enclosures that protect critical cabling and cable tray setups

Discover essential fire safety practices for cable tray systems with Hutaib Electricals, a trusted cable tray
