

How often should the fiber optic router be restarted

Preview

Ideally, you should reboot them at least once a month to clear out the memory and refresh your connections. But don't confuse "reboot" with "reset"--they're different. A "reboot" simply restarts your router, gateway, or mesh system, while a "reset" restores it to its default. There's no definitive rule for how often you should reboot your standalone router, gateway, or mesh system. Here's why this 2-minute habit matters. Extends your router's lifespan Continuous operation creates heat that. There doesn't seem to be a definitive answer to this query -- Wi-Fi routers, like many other pieces of equipment, could use a full restart once every month to ensure everything's working optimally. We tend to take our Wi-Fi connection for granted until something goes wrong. Maybe you need to grab a quick address from a website before. As a general rule, rebooting your modem and router every 1-3 months can be beneficial for maintaining their performance and preventing potential issues.
