All of today's current design series 'S', double row interior construction, convertible load centers, contains an interior label with the catalog number, series number, and date code on it. This standard describes requirements for numbering and labeling of real property electrical distribution equipment, circuits, and site lighting at Lawrence Livermore National Laboratory. MOTOR CONTROL CENTRE (MCC) AND SWITCHBOARD REFERENCES 1. Each switchboard and MCC shall. A few manufacturers emboss their name and logo right on the door of the panel, like the long-gone Pushmatic with their bulldog, or GE, or Federal Pacific's bright red circle; but most just affix a paper sticker on the inside of the panel door with their name somewhere in the listing of installation. The purpose of this standard is to establish consistency in the naming of components in the electrical distribution system and to allow flexibility in obtaining maintenance history information. Due to its structure, which completely covers all live parts, this equipment provides.
