In this article, we break down the three main marking processes --gravure (ink-wheel) printing, embossing, and inkjet printing--explaining how each works, their pros and cons, and what to watch for with different cable materials (like thick vs. thin jackets and TPE outer layers). One increasingly common requirement is the ability to emboss or stamp the client's logo directly onto straight cable tray sections. This is not a surface label or paint marking, but a permanent, integrated identification feature formed in the metal itself. Why Do EPC Projects Specify Logo Embossing. When printing in cable, wire, and extrusion applications, you need a coding solution that can print product information, logos, and product length markings that withstand production processes and shipment to end users, especially when coiled onto drums. The wire and cable marking portfolio includes cable labels, self adhesive labels, cable markers, printable shrinkable sleeves and tubes, self-laminating cable labels, label dispensers, pre-printed cable. SES-STERLING offers customised marking according to your specific needs, to ensure clear and durable identification of cables in industrial environments. This service optimises the management of electrical installations, facilitates maintenance and ensures compliance with safety standards without. Printing codes, logos and text on cables and wires is a high-speed task, and the wire marking equipment you use has to be reliable.

One increasingly common requirement is the ability to emboss or stamp the client's logo directly onto straight cable tray sections. This is not a

Logo, company name, or website printed directly on the cable ties Available Sizes: 100 mm, 150 mm, 200 mm, 250 mm, 300 mm, and more Widths: 2.5 mm, 3.6 mm, 4.8 mm, 7.6 mm+ Material: Durable
