

Is climbing telecommunications towers safe

Preview

Employees climb communication towers to perform construction and maintenance activities and face numerous hazards, including fall hazards, hazards associated with structural collapses and improper rigging and hoisting practices, and "struck-by" hazards. Pursuant to the OSH Act, employers must comply with safety and health standards and regulations issued and enforced either by OSHA or by an OSHA-approved state plan. In addition, the Act's General Duty Clause, Section 5(a) (1), requires employers to provide their employees with a workplace free. The work is inherently dangerous -- heights up to 2,000 feet, heavy equipment, RF exposure, weather windows, and time pressure from carriers and clients. The difference between a safe tower crew and a statistic is not luck. It's discipline, equipment, training, and a culture where no one is ever. Introduction General Topics Tower Climbers and Ground Crew Workers Carriers and Tower Owners Turfing Vendors VI. It is not a standard or regulation, and it neither creates new legal. Telecommunications tower safety is the set of practices, equipment standards and training requirements that protect tower climbers and technicians who install, maintain and decommission wireless communication infrastructure - including cell towers, broadcast antennas, microwave relay stations and.
