

Kuwait makes bulk purchase of 10G SD-WAN devices

Article Overview

Kuwait is expanding its enterprise networking capabilities with a bulk acquisition of 10G SD-WAN devices, leveraging advanced solutions from Fortinet and Cisco to enhance connectivity, security, and cloud integration.

Overview of the Purchase

Kuwaiti telecom operators and enterprises are increasingly adopting 10G SD-WAN devices to support high-speed, secure, and flexible wide-area network (WAN) architectures. Devices like the Fortinet FG-60F firewall, which supports 10 Gbps throughput and secure SD-WAN, are being deployed to ensure robust network performance, low latency, and advanced threat protection across corporate branches and cloud environments. These devices are designed for scalability, allowing enterprises to handle growing traffic from cloud applications, video conferencing, and large-scale data transfers.

Key Providers and Technology

- o Zain Kuwait offers SD-WAN services in collaboration with Cisco, providing a cloud-delivered overlay WAN that connects branches, data centers, and multi-cloud environments. Their solution emphasizes centralized management, analytics, and policy enforcement, enabling enterprises to optimize traffic, maintain high service-level agreements (SLAs), and implement secure multi-cloud transformations.
- o Ooredoo Kuwait has partnered with Fortinet to deliver secure SD-WAN services, integrating advanced security features with WAN edge connectivity. This deployment allows enterprises to achieve transport-independent connectivity, improved application performance, and simplified onboarding for new branches.

Strategic Benefits

The bulk purchase of 10G SD-WAN devices in Kuwait addresses several enterprise IT needs:

- o High-speed connectivity: 10G devices support bandwidth-intensive applications and reduce latency for cloud and SaaS services.
- o Enhanced security: Integrated next-generation firewall (NGFW) capabilities protect against cyber threats while enabling secure access service edge (SASE) architectures.
- o Operational efficiency: Centralized management and analytics simplify network monitoring, troubleshooting, and policy enforcement.
- o Cost optimization: SD-WAN allows enterprises to leverage multiple transport services (MPLS, LTE, broadband) efficiently, reducing reliance on expensive traditional WAN links.

Kuwait makes bulk purchase of 10G SD-WAN devices

Market Context

The SD-WAN market in Kuwait is growing rapidly, driven by digital transformation initiatives, cloud adoption, and the need for secure, high-performance WAN solutions. Analysts project continued expansion as enterprises seek flexible, scalable, and secure networking solutions to support remote work, multi-cloud deployments, and business-critical applications .

Conclusion

Kuwait's bulk acquisition of 10G SD-WAN devices represents a strategic investment in next-generation networking infrastructure, combining high-speed connectivity, advanced security, and cloud-ready capabilities. By leveraging solutions from Fortinet and Cisco, Kuwaiti enterprises and telecom operators are positioning themselves to meet the demands of modern digital business environments while ensuring operational efficiency and robust cybersecurity.
