

Article Overview

China International Telecommunication Construction Corporation (CITCC) and Vizocom are key providers for fiber optic network deployment in Mali.

Major Fiber Optic Network Contractors

China International Telecommunication Construction Corporation (CITCC) has been awarded contracts by the Malian government to expand the national fiber optic network. The projects include deploying over 800 km of fiber across regions such as Mopti, Koro, Gao, Ansongo, Labenzaga, and Tombouctou, with a total investment of approximately \$117-162 million. CITCC handles large-scale trenching, fiber installation, and network integration, aiming to improve broadband connectivity, reduce internet costs, and support Mali's digital transformation strategy .

Local and Specialized Providers

Vizocom is a Mali-based company offering robust terrestrial optical fiber networks for business, government, and industrial operations. They provide trenching, fiber deployment, and ICT services, including VSAT support for remote areas. Vizocom's services cater to sectors such as defense, oil and gas, mining, and construction, with 24/7 local support and integration with satellite platforms like Telstar 11N, Africasat 1A, ABS-2, Arabsat 5C, and NSS-12 . Their expertise makes them a reliable partner for both fiber trenching and network maintenance in Mali.

Considerations for Selecting a Manufacturer

- o Project Scale: CITCC is suited for large national or regional projects, while Vizocom can handle both enterprise-level and specialized deployments.
- o Service Scope: Look for companies offering trenching, fiber installation, network testing, and ongoing ICT support.
- o Local Support: Companies with local field teams and language support, like Vizocom, can ensure smoother project execution.
- o Integration with Other Technologies: For remote or underserved areas, providers offering satellite and hybrid solutions may be advantageous. For businesses or government agencies planning fiber optic trenching in Mali, CITCC and Vizocom represent the most prominent and capable options, covering both large-scale national infrastructure and specialized terrestrial network needs.
