An intelligent PDU (iPDU) is a rack-mounted power distribution unit equipped with embedded intelligence to monitor, measure, and control power delivery at the rack, outlet, or phase level. Their installation is becoming critical for meeting specific rack design goals. Basic PDUs provide reliable power distribution. Intelligent. As the last link in the power chain delivering critical power to IT loads, intelligent rack PDUs are a strategic asset for achieving high availability through elevated levels of responsiveness to change in data center capacities and densities.

FS offers six types of rack PDUs, from basic to advanced intelligent models, providing precise power distribution, real-time monitoring, and remote management. Explore FS PDU solutions today!
