

Article Overview

The Perkin Elmer PE 2400 Series II CHNS/O Analyzer typically ranges from approximately \$5,000 for used units to \$25,000 or more for refurbished or fully equipped models.

The PE 2400 Series II is a widely used elemental analyzer for determining carbon, hydrogen, nitrogen, sulfur, and oxygen content in solids, liquids, and viscous materials, employing the classical Pregl-Dumas combustion method. Pricing varies significantly depending on the condition, included accessories, and vendor.

Price Ranges and Vendors

- o eBay lists used and refurbished PE 2400 units, often starting around \$5,000, with free shipping available for some listings.
- o Bimedis indicates a broad price range for the 2400 Series II, though exact figures depend on configuration and condition; refurbished or fully equipped units can reach \$25,000 or higher.
- o Spectralab Sci offers refurbished instruments and requests a quote, reflecting that prices are customized based on options like CHN, CHNS, or O2 analysis modes, and additional accessories such as the Column Switching Accessory (CSA) or AD-6 Ultra Microbalance.
- o Machinio provides listings for both new and used analyzers, allowing buyers to compare prices and conditions across multiple sellers.

Additional Considerations

- o Accessories and Maintenance Kits: The PE 2400 Series II Accessory Kit, which includes essential replacement parts and maintenance tools, is sold separately and can add to the overall cost.
- o Refurbishment and Qualification: Refurbished units often undergo Installation Qualification (IQ), Operational Qualification (OQ), and Performance Qualification (PQ), which can justify higher prices due to verified performance.
- o Vendor Support: Many suppliers provide technical support, calibration, and installation services, which may influence the final purchase price. In summary, the PE 2400 Series II Spectrometer price depends on condition, included accessories, and vendor, with used units starting around \$5,000 and refurbished or fully equipped models potentially exceeding \$25,000. Buyers are encouraged to request quotes from multiple vendors to obtain the most accurate pricing for their specific laboratory needs.
