

PoE switch with five ports

Article Overview

The TP-Link TL-SG1005P is a reliable 5-port gigabit switch with 4 PoE+ ports, providing up to 30W per port and a total PoE budget of 65W.

Key Features of TP-Link TL-SG1005P

- o Ports: 5 Gigabit Ethernet ports, including 4 PoE+ (802.3af/at) and 1 non-PoE uplink port for high-speed connections .
- o PoE Power: Each PoE port delivers up to 30W, with a total power budget of 65W, suitable for IP cameras, access points, and VoIP phones .
- o Plug-and-Play: No configuration required; easy setup for home or small office networks .
- o Advanced Features: Supports 802.1p/DSCP QoS for traffic prioritization and IGMP Snooping for optimized multimedia delivery .
- o Durability and Design: Fanless, quiet operation with a sturdy metal case; can be desktop or wall-mounted .
- o PoE Management: Automatic detection of PoE/non-PoE devices, power overload protection, and PoE Auto Recovery to reboot unresponsive devices .
- o Extended Range: Extend Mode allows PoE transmission up to 820 feet, ideal for large-area deployments .
- o Warranty: Backed by a 3-year warranty and responsive technical support .

Use Cases

- o Surveillance: Power and connect multiple IP cameras without separate adapters.
- o Small Office/Home Office: Connect and power access points, VoIP phones, and computers.
- o Multimedia Applications: Optimized for IPTV or video streaming with QoS and IGMP Snooping.

Other Considerations

- o If you need a simple unmanaged switch without PoE, other 5-port gigabit switches are available at retailers like Best Buy or Newegg .
- o Ensure your total PoE power requirements do not exceed the 65W budget; the switch intelligently prioritizes high-priority ports if the limit is exceeded . The TP-Link TL-SG1005P is widely recommended for its combination of PoE capability, reliability, and ease of use, making it a strong choice for small networks requiring powered devices.
