

## Article Overview

GYTA optical cables typically cost between \$0.45 and \$0.59 per meter for standard bulk orders.

GYTA fiber optic cables are aluminum-armored, loose tube outdoor cables designed for aerial, duct, and direct burial installations, offering high mechanical strength, moisture resistance, and durability . The price range of \$0.45-\$0.59 per meter applies to standard core counts, with costs varying depending on the number of cores, fiber type (e.g., G.652D or G.657A), and outer sheath material, such as LSZH for fire safety .

## Factors Affecting Price

- o Core Count: GYTA cables are available from 2 to 144 cores, and higher core counts generally increase the price per meter .
- o Fiber Type: Single-mode fibers like G.652D or G.657A may slightly affect pricing due to performance specifications .
- o Sheath Material: Options like aluminum-polyethylene laminate or LSZH can influence cost, especially for specialized environmental or safety requirements .
- o Customization: Suppliers often offer tailored solutions for large projects, which can adjust the final price .

## Purchasing Tips

- o Bulk Orders: Ordering in bulk typically reduces the per-meter cost.
- o Supplier Comparison: Prices may vary between manufacturers, so comparing multiple suppliers can help secure competitive rates .
- o Request Quotes: For precise pricing, especially for customized specifications, contacting suppliers directly is recommended, as some companies respond within 12 hours to inquiries . In summary, while the standard bulk price is \$0.45-\$0.59 per meter, the final cost of GYTA optical cable depends on core count, fiber type, sheath material, and customization options.

Gyta optical cables are commonly used in telecommunication networks for long-distance

GYTA is with high strength loose tube that is hydrolysis resistant and the optical cable filling materials ensure high reliability, its APL
