Power Management: Distributes electricity evenly across circuits. System Organization: Keeps wiring structured and manageable. Fault Isolation: Allows specific circuits to be shut down without affecting the entire system. Secondary Distribution Box: Distribution boxes for each floor or. Differences Between Primary, Secondary, and Tertiary Distribution Boxes Designed for construction or large-scale projects as a main distribution point. Primary distribution systems consist of feeders that deliver power from distribution substations to distribution transformers. They are often used in places where safety is a priority, such as fire-resistant buildings.
