SFP stands for Small Form-Factor Pluggable, a compact, hot-pluggable interface used universally in switches, routers, and firewalls. Think of it as the "translator" for your network equipment, converting electrical signals into optical signals. The 1000BASE-LX/LH SFP, compatible with the IEEE 802.3z 1000BASE-LX standard, operates on standard single-mode fiber-optic link spans of up to 10 km and up to 550 m on any multimode fibers. This solution reduces customer design time, thus saving customer cost without compromising performance. This is achieved by combining TI's.
