

The distribution box made a slight noise

Preview

This low-level hum is caused by the slight vibration of electrical currents or magnetic fields within components like transformers or the main breaker. If the sound is only audible when standing directly next to the panel and remains constant, it is not a cause for immediate concern. A breaker box (electrical panel or service panel) is the main distribution center for your home's electrical system. It routes power from the service entrance and divides it among individual circuits. The panel's function is protection, housing circuit breakers that automatically interrupt the flow. Here, we'll dive into the causes behind a breaker box making sizzling noise, and how we can remedy it. Faint Circuit Breaker Buzzing 2. Loud Sizzling Noise and Spark There are plenty of reasons why you hear that electrical box humming noise. In this guide, we'll walk through these.
