

The power distribution box output is normal but there is no power

Preview

Be sure that the power distribution box has sufficient power provided to it. Long cable runs can result in a voltage drop, which can be solved by using a heavy gauge wire. A PDU is a device that distributes electrical power to multiple AV components, such as monitors, projectors, amplifiers, and other equipment in a meeting room. Specific output circuit (s) have no power. Check wires/DIN terminal clasps to. If your circuit breaker is on, but no power is getting to your outlet, light, or appliance, there is a simple process to go through in order to find the culprit. Do not touch live parts, turn off the corresponding power switch to avoid the risk of electric shock. The circuit breaker for that room may have been tripped, but due to a problem in the wiring it hasn't reset itself automatically.
