Wire mesh cable trays, also known as basket trays, are lightweight and provide excellent ventilation, making them perfect for IT and telecommunication setups. Promotes optimal airflow, preventing overheating of cables. Lightweight design ensures easy installation and handling. An engineer or designer will usually specify the type of cable tray that has the features to suit the project. This guide explores the main types of cable tray, their applications, material selection, installation considerations, and industry trends to help engineers and project owners build reliable. Quick answers: A cable tray is an open, rigid support system used to route and organise electrical cables in buildings and industrial facilities -- replacing conduit in most large-scale installations.
