

What is an EPS distribution box

Preview

EPS boxes--also known as tempex boxes--are lightweight, insulating packaging solutions that are ideal for transporting temperature-sensitive products. Its manufacturing process involves the expansion of polystyrene resin beads using heat and steam, resulting with exceptional cushioning and insulation properties. The small hollow balls are full of air. This feature translates into unique shock-absorbing features.

The EPS Modular Metal clad Enclosures 14E-Series Standard Series is a modular distribution board system with a durable matt surface finish for long-lasting protection. It is available in configurations

An EPS insulation box, also known as an Expanded Polystyrene insulation box, is a specialized type of packaging container designed for the storage and

This is L size standard range modular type metalclad enclosure. It is 2 row for 36 ways. This modular system designed with flexibility in the arrangement of the various circuit protection devices. Matt

EPS foam can be converted into loose-fill packaging or custom shapes to fill empty spaces within packages, preventing products from shifting and sustaining damage during transit.

Moreover, its compression resistance means that EPS is ideal for stackable packaging goods. The majority of EPS packaging manufactured in Australia is used in the transport of fruit, vegetables and

EPS boxes and trays allow operators to insert and remove individual parts without effort. The employees can easily stack them when empty, as they are very light.
