The PDU's outlets should match the plugs on the equipment you'll be connecting. Some PDUs offer a mix of outlet types. The total power required by equipment connected to the PDU must not exceed the PDU's maximum load rating (expressed in kVA). In North America, the maximum input and output capacity is limited to 80% (this is referred to as "agency de-rating"). For example, a single-phase PDU with a nominal voltage of 120V and de-rated input current of 12A (80% of 15A). Remote management software - Eaton's PowerAlert(R) Device Manager (PADM) is the firmware that enables remote management of PDUs equipped with an LX network interface card. The latest version, PowerAlert Device Manager 20.0 (also known as PADM20), provides customizable and intuitive remote management capabilities, expanded maintenance functions and ba.
