

Zambia blows up fiber optic cable

Article Overview

There is no verified report of Zambia blowing up a fiber optic cable; on the contrary, Zambia has been actively expanding its fiber optic network to enhance regional connectivity.

Zambia has recently launched several major fiber optic projects aimed at improving internet reliability and regional digital integration. Notably, the Chanida-Cassacatiza cross-border interconnector with Mozambique links Zambia's national fiber backbone to Mozambique's submarine cable network, providing redundancy, enhancing internet reliability, and facilitating cross-border data exchange . This project positions Zambia as one of the most digitally connected countries in Southern Africa, with fiber links to eight neighboring nations . Additionally, Zambia has signed a Memorandum of Understanding with Burundi to establish a fiber optic connection under Lake Tanganyika, connecting Mpulungu District in Zambia to Burundi, further strengthening regional digital connectivity . These initiatives reflect Zambia's commitment to expanding its digital infrastructure rather than damaging it. Zambia's fiber network is supported by private sector partnerships, such as Bayobab Zambia and Vodacom, and is integrated with major submarine cable systems like the 2Africa cable, which connects Africa to Europe and Asia . These developments improve network resilience, reduce reliance on limited transit routes, and support critical services including e-government, social cash transfers, and business communications . In summary, reports of Zambia blowing up a fiber optic cable are unfounded. The country is actively investing in fiber optic infrastructure to enhance connectivity, regional integration, and internet reliability.
